

# VMware Cloud Protection with Rubrik

Capitalize on all that hybrid cloud has to offer with modernized backup and recovery at scale.

VMware Cloud delivers a simple, scalable way for organizations to extend their on-premises vSphere environments and management tools to the cloud. Enterprises can leverage Rubrik's partnership with VMware to modernize backup and recovery and kick-start their cloud journey with seamless, automated protection for workloads running in VMware Cloud on Amazon Web Services, Microsoft Azure, and Google Cloud Platform. As you shift your on-premises applications to VMware Cloud, Rubrik orchestrates all critical data management functions – backup, recovery, search, archival, analytics, and more – for your hybrid cloud environment.

## TOP BENEFITS

### AUTOMATION SIMPLICITY

No need to manually calculate sizing for proxy VMs. Rubrik automatically updates proxies as your environment changes.

### BUSINESS CONTINUITY

Protect against data loss and corruption. Leverage the cloud as a disaster recovery target for on-premises vSphere workloads. Bring VMs back online fast with automated DR orchestration.

### UNIFIED MANAGEMENT

Use a single control plane to automate and unify data management across your entire VMware infrastructure, whether on-premises or in the cloud.

## HOW IT WORKS

1. Add your vCenter Server Fully Qualified Domain Name (FQDN) and account credentials. Rubrik will pull certifications and securely authenticate the account.
2. Select the proxy VM network. Rubrik will automatically deploy proxy VMs within the customer data center without any manual calculations or sizing.
3. Updating the network configuration will trigger a full refresh and any necessary proxy management jobs. Rubrik will deploy, update, delete, and adjust proxies as your environment scales, always optimizing for only the necessary resources.
4. Get enhanced visibility right from your Rubrik dashboard with a list of all proxy VMs across all vCenters. Dive under the hood with a robust monitoring dashboard displaying an overview of the deployed proxies, including IP address and VMDKs in use.
5. Rubrik CDM is deployed in a Cloud Cluster outside of your data center to provide a safer, separate storage domain without storing backup data directly in your VMware environment.
