

Rubrik for SAP HANA

Empowering Backup Admins with Automated Protection and Unified Control

Enterprises are undergoing a dizzying pace of digital transformation. For many organizations, real-time analytics and insights are critical to the success of their transformation, and SAP HANA has become their database of choice. While SAP HANA provides a rich ecosystem of native backup and recovery tools to SAP administrators, they are typically not accessible by the backup and infrastructure teams, leaving them wanting more visibility and control.

Rubrik empowers backup administrators and infrastructure teams by delivering a single software solution that unifies the protection of SAP HANA environments across on-premises and the cloud. With Rubrik, backup teams can automate the discovery of their SAP HANA databases and can keep them protected with a single SLA policy engine. They can monitor the state of their data protection across their organization and support low recovery point objectives (RPOs) and recovery time objectives (RTOs) to keep their systems running. They can do all of this without affecting the ability of SAP HANA admins to perform on-demand backups and restore operations using native tools such as SAP HANA Cockpit and SAP HANA Studio.

KEY BENEFITS

EMPOWERING BACKUP ADMINS

Provide backup admins with visibility and control from a single pane of glass. Facilitate enterprise-wide compliance through centralized reporting and monitoring.

UNIFIED PROTECTION

Keep SAP HANA databases protected no matter where they are. Leverage a single software solution to orchestrate the protection of your databases on-premises and in the cloud.

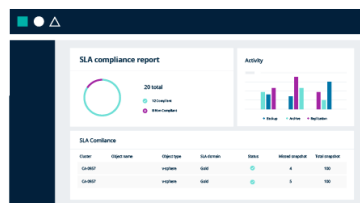

STREAMLINE MANUAL WORK

Automatically discover SAP Hana databases as they are created and keep them protected by assigning an SLA policy that automates frequency, retention, replication, and archival.

HOW IT WORKS

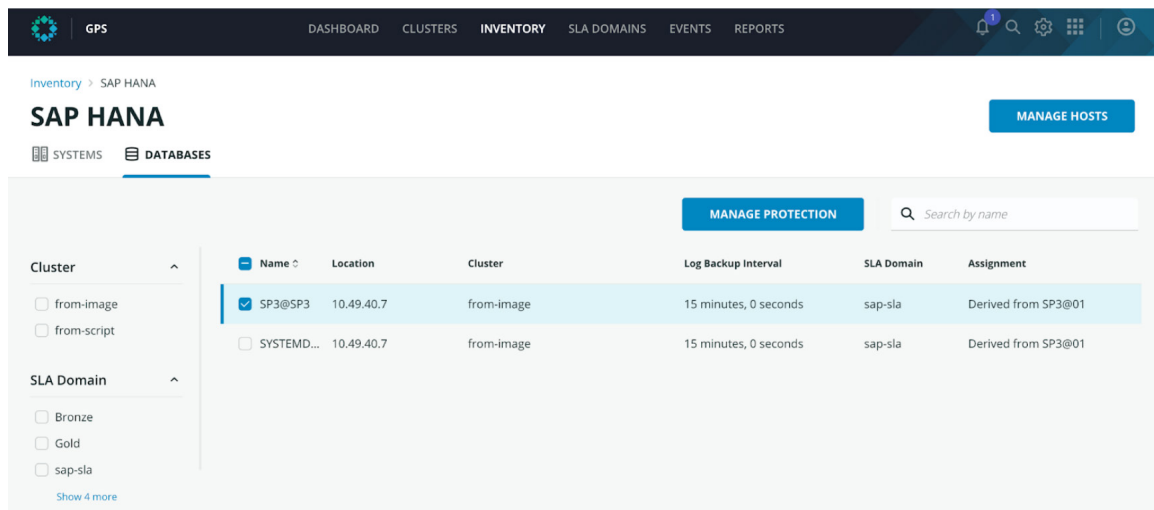

Deploy the Rubrik Backup Service (RBS) and add your SAP HANA Host or System to Rubrik to discover the SAP Hana Databases in your environment. Once discovered, you can assign a Rubrik SLA Policy of your choice - automating backup frequency, retention, replication, and archival for full, incremental, and differential backups. Rubrik will take care of the rest.

Rubrik Cluster

Rubrik Backup Service (RBS)

FEATURES

Rubrik for SAP HANA automates the protection of your enterprise environment with a single software solution:

Native Integration: Rubrik includes catalog integration so customers can continue to use either SAP HANA Studio or SAP HANA Cockpit to trigger restores.

Hassle-Free Connector: The Rubrik Backup Service (RBS) is a self-managing connector. There are no manual steps on the SAP HANA host other than deploying the RBS agent.

Automated Discovery: Add SAP hosts and systems to Rubrik, and Rubrik will automatically discover SAP HANA databases as they are created.

SLA Policy Engine: Streamline the protection of SAP HANA databases by assigning SLA policies that configure backup frequency, retention, archival, and replication. Support full, incremental, and differential backups.

Point-in-Time Granularity: Leverage data and log backups to enable point-in-time recovery. Roll forward log backups on top of data backups for granular control over recovery points.

Storage Efficiency: Leverage target-side deduplication to reduce the overall total cost of ownership (TCO).

Single Pane of Glass: Enable DBAs to use existing SAP HANA tools like SAP HANA Studio while empowering traditional backup teams. Keep your SAP HANA databases protected across on-premises and cloud with centralized visibility and control.

Enterprise Scale: Protect SAP HANA Tenant Databases on a single node and SAP HANA Databases across multiple nodes to address scale-up and scale-out use cases.

Active Monitoring: View the status of data and log backups from a centralized activities pane.

Comprehensive Compliance Reporting: View summary backup information, latest recovery points, and identify which backups have failed from across your environment.
