

# JE Dunn Embraces Software-Defined Data Center and Automation with Rubrik

## INDUSTRY

Construction

## RESULTS

- 62% TCO savings
- 90% management time savings
- 75% reduction in data center footprint
- Reduced recovery times (from hours to minutes)

## THE CHALLENGE

- Lengthy recovery times with tape
- Inability to automate workflows with legacy solution

## THE SOLUTION

- Single policy engine to automate backup and recovery
- Fast recovery
- API-driven integration with VMware vSphere and reporting workflows

JE Dunn Construction has been a leader in the commercial construction industry since 1924, providing construction management services, design-build, and integrated project delivery. Headquartered in Kansas City, Missouri, JE Dunn has 21 offices nationwide and over 2,500 employees. It is the 11th largest domestic general building contractor in the United States, generating over \$2.9 billion in revenue in 2017 alone.

IT is tightly integrated with JE Dunn's business strategy, "Our IT team provides trusted, innovative technologies that enable our executive management, project teams and clients to advance transformational business solutions," said Jason Hull, Senior Systems Manager.

Hull manages a team that is responsible for data protection and data center operations, supporting 2,500 employees and over 50,000 accounts. "We empower lean processes at our construction sites with technology, enabling our teams and partners to be more collaborative and productive. On top of that, we're committed to providing stability, availability and performance," added Hull. "Rubrik is a crucial part of achieving that strategy."

## MANAGEMENT COMPLEXITY AND POOR PERFORMANCE WITH LEGACY SOLUTION

Prior to Rubrik, it was challenging for JE Dunn to protect their 99% virtualized environment with aging, tape-centric software.

"As we began to evaluate new vendors, we wanted a solution that was disrupting the backup and recovery industry. Rubrik was our unanimous choice," said Hull. "It was evident in choosing Rubrik that we'd be gaining more than just backup and recovery. We'd also be enabling orchestration and automation, in addition to providing a high level of resiliency in the event of data loss or a disaster."

## DRIVING AUTOMATION WITH RUBRIK'S API-FIRST ARCHITECTURE

"One of our key drivers in choosing Rubrik was its API-first architecture. It was a perfect fit for our automation-centric approach," said Hull. "We are currently leveraging Rubrik's APIs to consolidate our executive dashboards into one reporting platform, as well as surfacing business continuity RTO/RPO information for seamless data center operations."

"On top of that, Rubrik's API playground was very helpful when our team was generating code for database recovery. These APIs allow our less technical engineers to work with Rubrik and provide even more value to the business," added Hull.

## ADOPTING A SOFTWARE-DEFINED DATA CENTER WITH VMWARE VSPHERE AND RUBRIK

JE Dunn is looking to fully embrace the ethos of a true software-defined data center (SDDC). VMware has long provided this with vSphere, a hypervisor that disrupted the data center space and continues to innovate every year.

A main concept of SDDC is a true software fabric that can be programmatically controlled. By combining Rubrik's RESTful APIs with VMware automation, JE Dunn can systematically apply SLA policies across the data center.

Additionally, JE Dunn is working to enable self-sufficiency across the organization and remove IT as the bottleneck. Hull and team can achieve this by allowing developers to automatically spin up live mount copies of VMs for testing and enabling business or VM owners to instantly restore workloads as needed.

## SIGNIFICANT MANAGEMENT TIME SAVINGS AND HIGH PERFORMANCE WITH RUBRIK

JE Dunn uses Rubrik extensively to protect their applications. Benefits include:

- **62% TCO savings and 90% management time savings:** "Our backup administration time went from four hours per week to 20 minutes."
- **Easy to install:** "I've never experienced such a simple installation before. Rubrik was installed on a Sunday evening and backing up successfully on Monday morning. The fact that it was up and running in the same day gave us instant gratification."
- **75% reduction in data center footprint:** "With Rubrik's software convergence, our data center footprint went from 8U to 2U."
- **Significantly reduced recovery times (from hours to minutes):** "With our previous solution, it could take hours to recover. With Rubrik, we're able to satisfy most requests in less than 10 minutes. Outside departments are recognizing the solution as an important tool for recovering lost work."
- **Cloud mobility:** "We're required to store all of our data on premises due to client requirements. However, if we wanted to explore cloud migration in the future, we know Rubrik's vendor-agnostic integrations with private and public cloud will make that easy for us."
- **Replication for disaster recovery:** "With Rubrik, we are replicating backups to our DR facility. This means we are no longer paying to store tapes offsite. We are confident knowing we can recover if necessary."

Rubrik delivers a single platform to manage and protect data in the cloud, at the edge, and on-premises. Enterprises choose Rubrik's Cloud Data Management software to simplify backup and recovery, accelerate cloud adoption, and enable automation at scale. Rubrik's run-anywhere, scale-out architecture is built to empower IT departments today and in the future, reducing total cost of ownership while enabling infrastructure flexibility for a multi-cloud world.
